

Instructions:

To thin the catfish bait, set jar in the sun or a warm area. Setting in direct, hot sunlight for a length of time will liquefy bait. You can also thin the bait by adding cooking oil, 1 to 2 tsp., as necessary for the consistency you desire.

Note: This catfish bait is intended for use with dip worms or sponges. The bait will stick even when extremely thin.

For a thicker consistency, set jar in shaded area or place in a cooler. Bait temperature of 72 to 80 degrees F. is optimal.

This product is not intended for human consumption.

Stir catfish bait frequently with stick or spoon, and push your plastic worm or sponge deeply into the paste covering it thoroughly.

Expansion of this product may occur depending on the environment in which it is stored. Cat Tracker Baits, Inc. cannot be held responsible.
